

## NextEra Energy (NYSE: NEE)

NextEra Energy is the world's biggest producer of wind and solar energy. The following is a basic research report that contains some information that may be speculative and statistics that are subject to change, so the author advises that one does not make a financial decision based solely on this document.

In 2019, NextEra was considered the best-in-class at fulfilling ESG guidelines by S&P Global Ratings. It received a score of 86. It's clear that NEE is an environmentally-friendly company. According to Daily Energy Insider, NextEra plans to drastically cut down their carbon emissions by 67% by 2025, based on their baseline number set in 2005. If this rate continued, NEE would have zero carbon emissions by around 2035.

According to Censible's ESG ratings, NEE is a top performer in:

- Carbon Footprint
- Pollution Prevention
- Employee Ownership, Satisfaction, Benefits, and Pay
- Ethical Practices

According to Censible's ESG ratings, NEE is a performs well in:

- Water Conservation
- Workplace Health and Safety
- Diversity of Corporate Leadership

According to Censible's ESG ratings, NEE is an average performer in Integrity of Corporate Governance. This brief overview of NextEra Energy reveals that NEE fits the bill by most ESG standards, and excels in environmental awareness.

Recommendation: **Buy**

**NEE**

Price: **\$75.55**

MSCI ESG Ranking: **AAA**

Sustainalytics' ESG Risk Ratings:  
**Medium Risk**

**Electrical Utilities & IPPs**

**Analyst: Warner MacDonald**

NEE has outperformed the S&P 500 when measured in the past month, the past three months, the past six months, the past year, the past five years, and the past ten years. In fact, over the past ten years NEE has gone up about 441%, performing about two and a half times as well as the S&P 500, which went up about 176% during that period.

This year, NEE has consistently performed better than NASDAQ Consensus EPS forecasts predicted. In each quarter of 2020, NEE performed 1.52%-9.09% better than analysts anticipated. If this pattern were to continue, NEE would outperform expectations by approximately 3.79% next quarter. Considering that NASDAQ's consensus EPS forecast expects a 2.29 EPS in December 2020, a continuance of the outperforming trend would mean December's actual EPS would be approximately 2.38. Considering large countries' trend towards sustainability, the sustainable energy sector has an opportunity for immense growth.

J. P. Morgan's report on NEE seemed optimistic about the company's future, and stated that COVID-19 was largely insignificant in slowing the company's growth. One major change that could signal growth is NextEra's plan to eventually merge Gulf Power and Florida Power & Light (in 2022, according to Miami Herald). J. P. Morgan Global Equity Research Coverage says that NEE is a 47% buy.

Yahoo! Finance states that NEE is at a "near-fair value" and that the stock is currently following a "Bearish pattern." Although Yahoo! expects NEE to eventually recover, Yahoo! predicts that NEE will continue its downward trend for the next two to six weeks.

Robinhood's overview of 20 analyst ratings places NEE at a 60% buy.
